Contents

Introduction **1**
1 Literature review 1
1.1 Magnetic bearing applications 1
1.2 Magnetic bearing classification 2
1.3 Eddy currents and magnetic bearings 12
2 Objectives and Motivations 21

I Modeling **27**

1 Mechanical model **29**
1.1 Equations of motion 29
1.2 Limit spin speed 33
1.3 Numerical case 35
1.4 Intuitive explanation 36
1.5 Synthesis 40

2 Electromechanical model **41**
2.1 Assumptions 42
2.2 Consequence of an angular shift on the equations of motion 42
2.3 Power considerations 45
2.3.1 Mechanical power 45
2.3.2 Electrical power 47
2.3.3 Power balance 49
2.4 Limit spin speed 51
2.5 Numerical case 54
2.6 Synthesis 55

3 Advanced electromechanical model: evolution of the impedances with the frequency **59**
3.1 Evolution laws 60
3.1.1 Approach based on the diffusion equation . . . 60
3.1.2 Phenomenological approaches 63
3.2 Model comparison 67
3.3 Synthesis 76

II Validation **79**

4 Experimental validation **81**
4.1 Elementary experiment 81
4.1.1 Setup description 81
4.1.2 Observations 82
4.2 Basic experiment 84
4.2.1 Setup description 84
4.2.2 Observations 90
4.3 Synthesis 92

5 Numerical validation **93**
5.1 Model parameter identification 94
5.1.1 Stiffness 94
5.1.2 Rotating damping parameters 95
5.1.3 Non rotating damping 98
5.1.4 Numerical identification 99
5.2 Simple case with radial flux 103
5.2.1 Geometrical and physical characteristics 103
5.2.2 Finite Element Results 105
5.2.3 Electromechanical model validation 109
5.3 Simple case with axial flux 120
5.3.1 Geometrical and physical characteristics 120
5.3.2 Experimental and finite element results 120
5.3.3 Electromechanical model validation 125
5.4 Electrodynamic magnetic bearing 134
5.4.1 Geometrical and physical characteristics 134
5.4.2 Electromechanical model validation 136
5.5 Non sinusoidal case 146

5.5.1 Geometrical and physical characteristics 146
5.5.2 Experimental and finite element results 146
5.5.3 Electromechanical model 149
5.6 Synthesis 157

III Exploitation **159**

6 Parameter analysis **161**
6.1 Model parameters 161
6.1.1 Global analysis 161
6.1.2 Particular case 170
6.2 Physical parameters 175
6.2.1 Material 175
6.2.2 Scale effect 180
6.3 Synthesis 186

7 Rotor dynamic simulations **187**
7.1 Unbalance on the rotor 188
7.2 Damped stator 191
7.3 Synthesis 196

IV Conclusion and perspectives **201**

Bibliography **211**

Nomenclature **219**

Appendix **227**

A Finite element modeling **227**
1 Physical equations 228
2 Mesh 230
3 Force calculation 236
3.1 Maxwell stress tensor 236
3.2 Lorentz force 238

3.3 Comparison 238
4 Some additional remarks 239
